Bygg Reis Deg 2023 in Lillestrom

Oslo

The Role of Cities in Reducing Emissions from the Construction Sector – Oslo Paving the Way

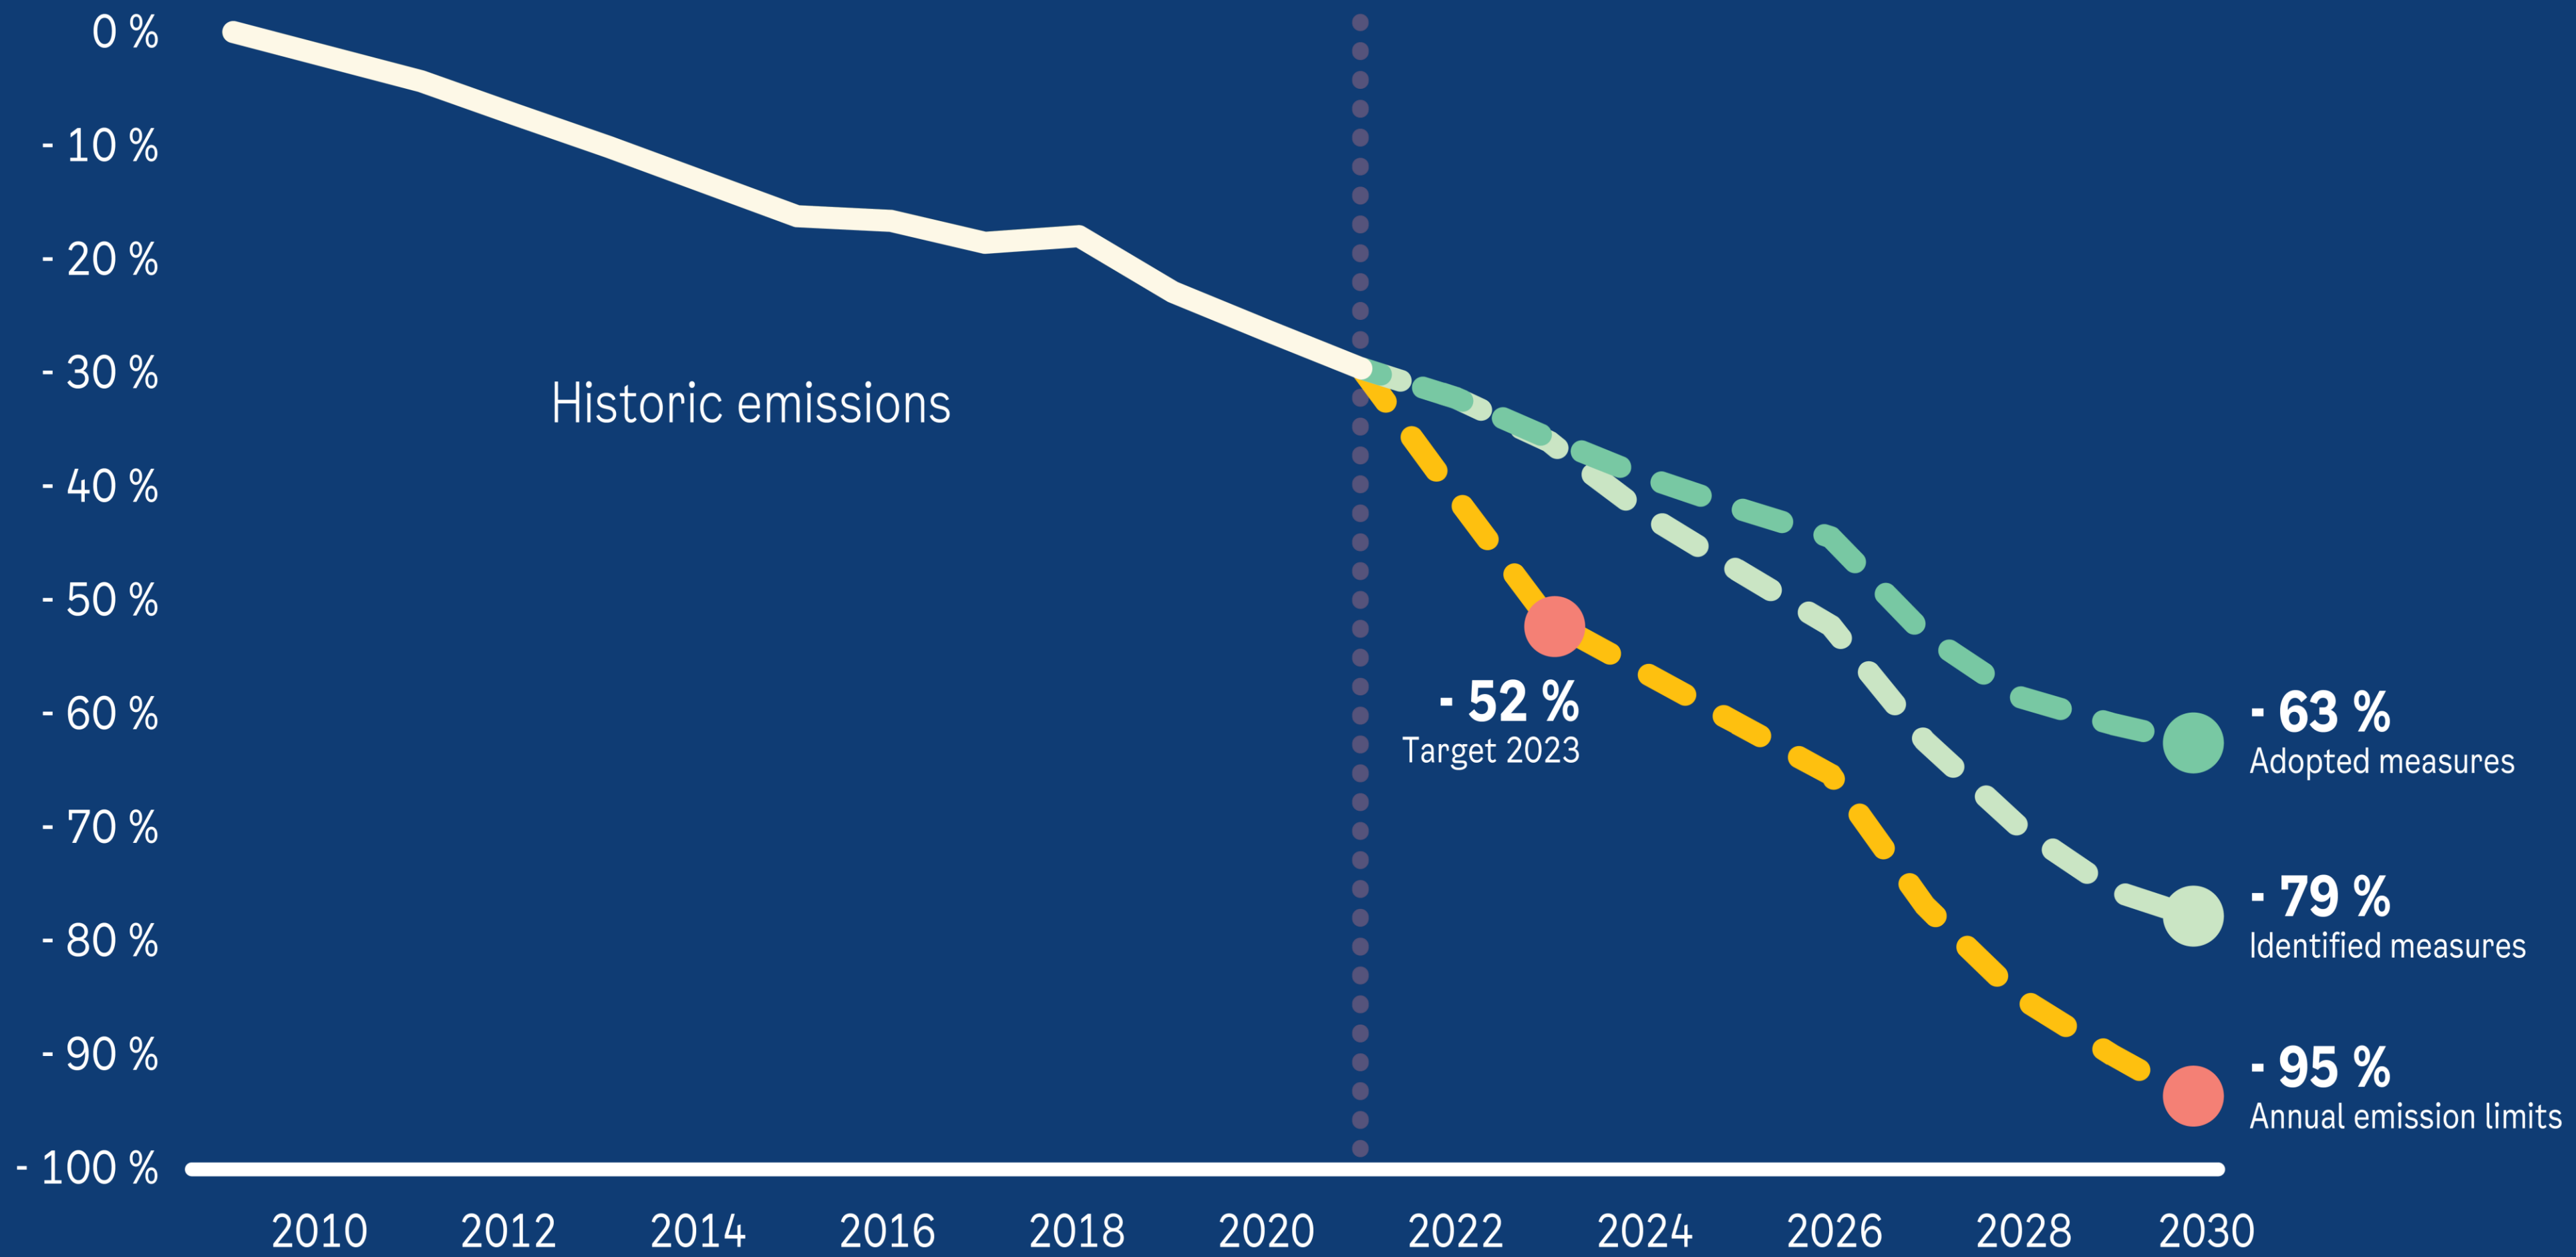

Outline

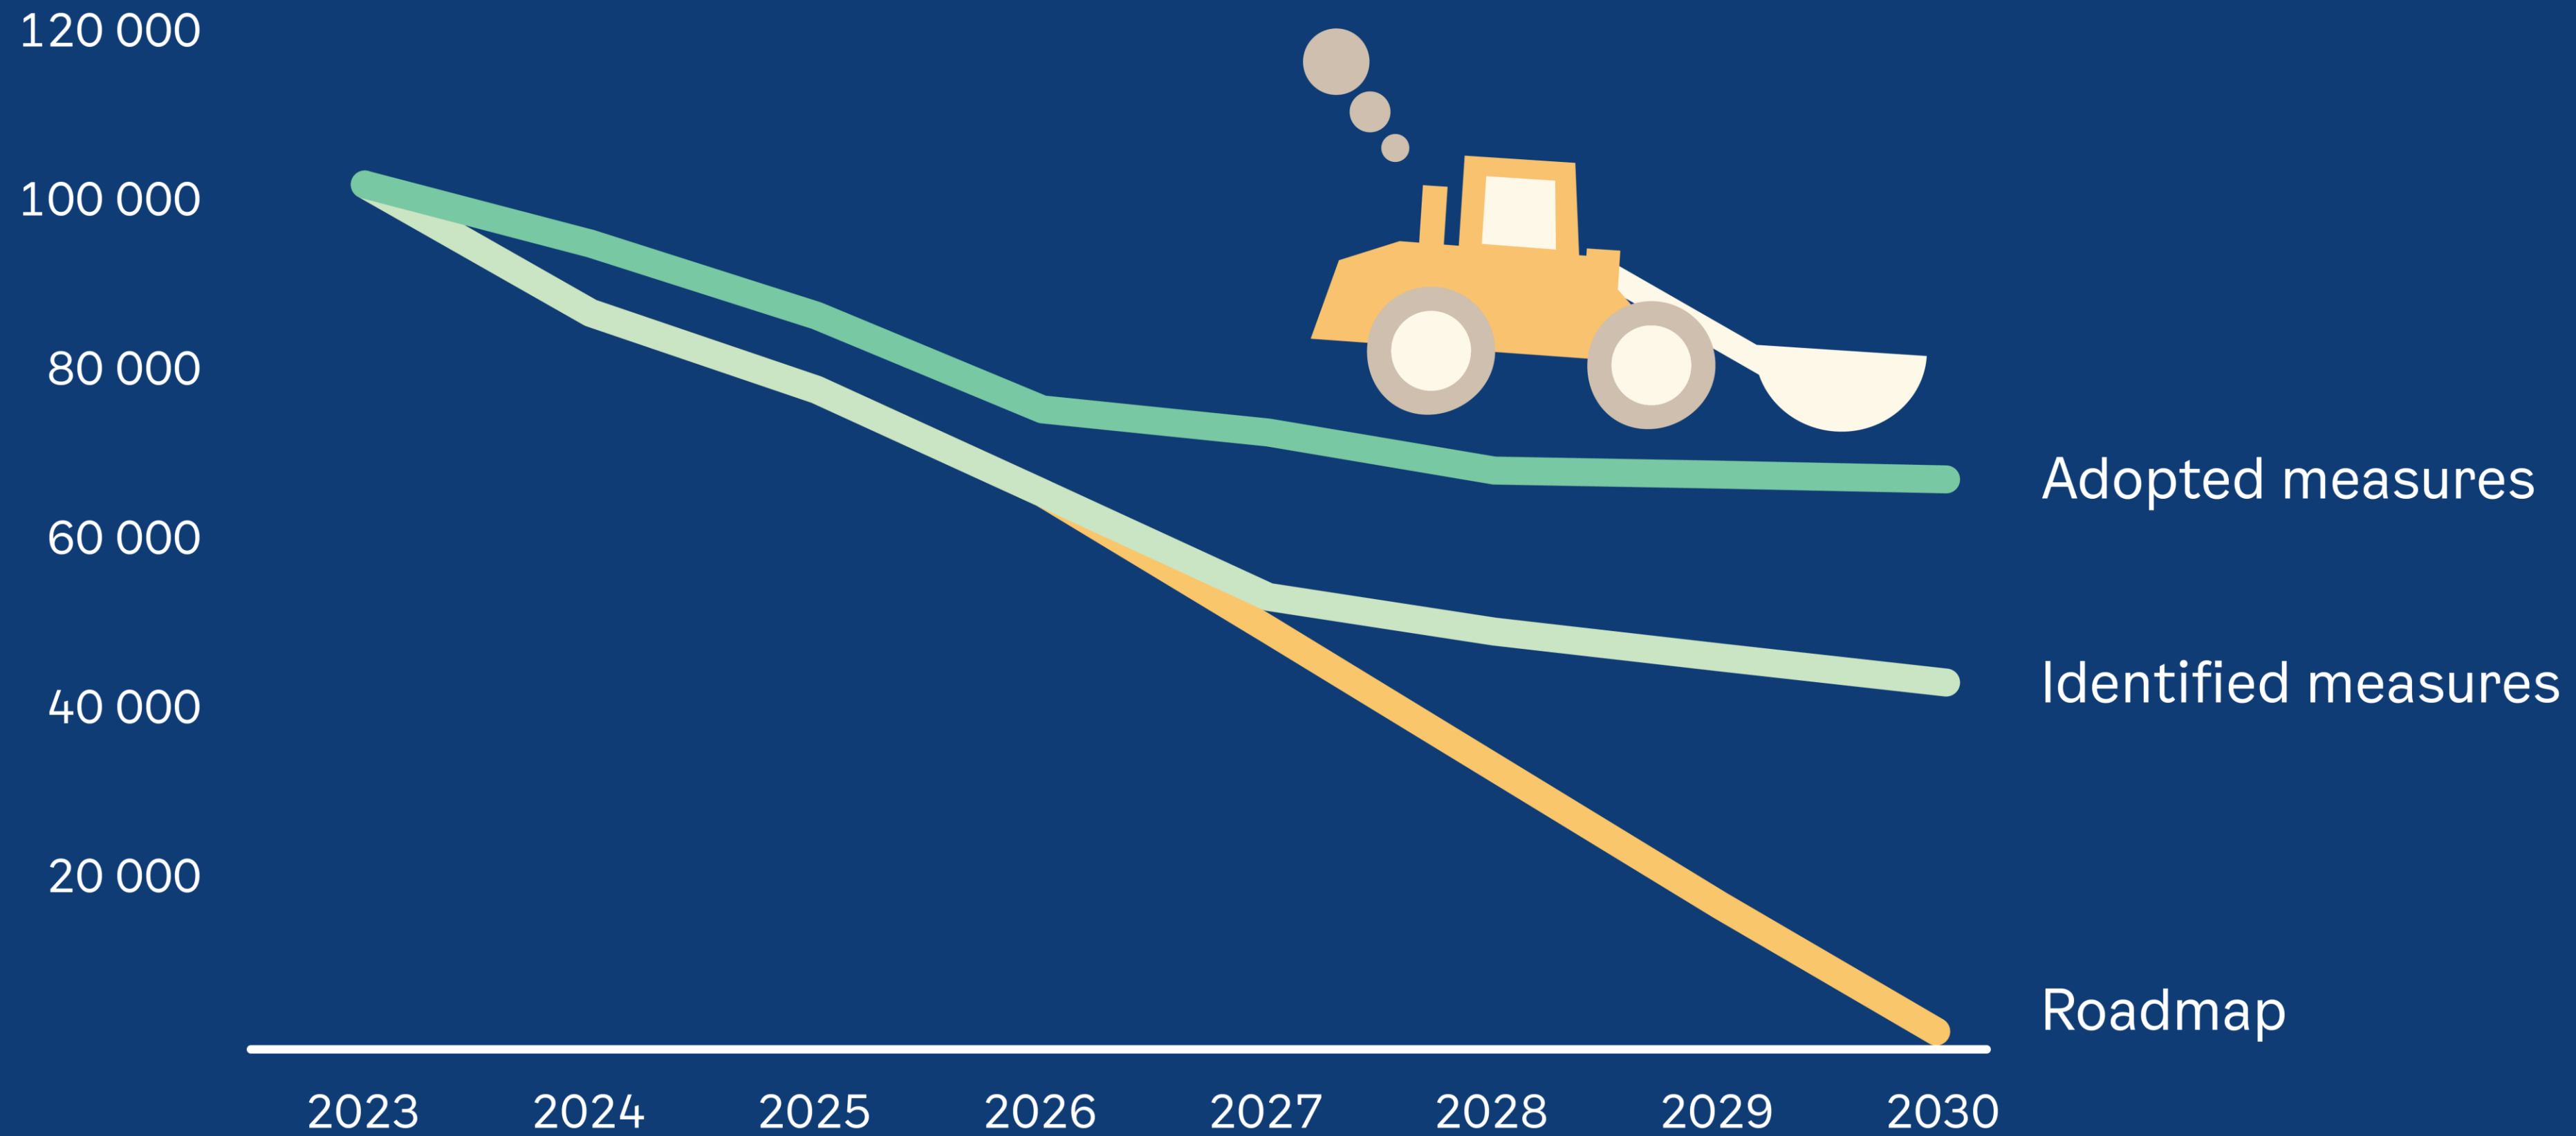

- Oslo climate targets
- Are we on track?
- Roadmap for zero emission construction
- How do we get there?
- Reducing indirect emissions from construction

Three Sectors – 90 Percent of the Emissions

Tonnes CO₂-e

Green procurement

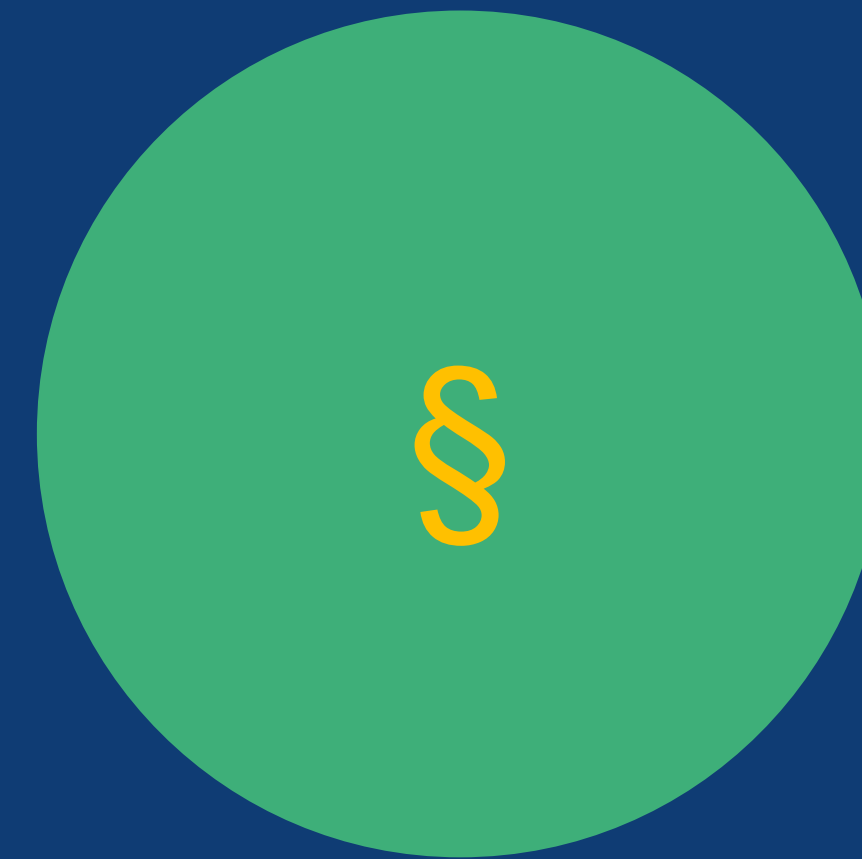

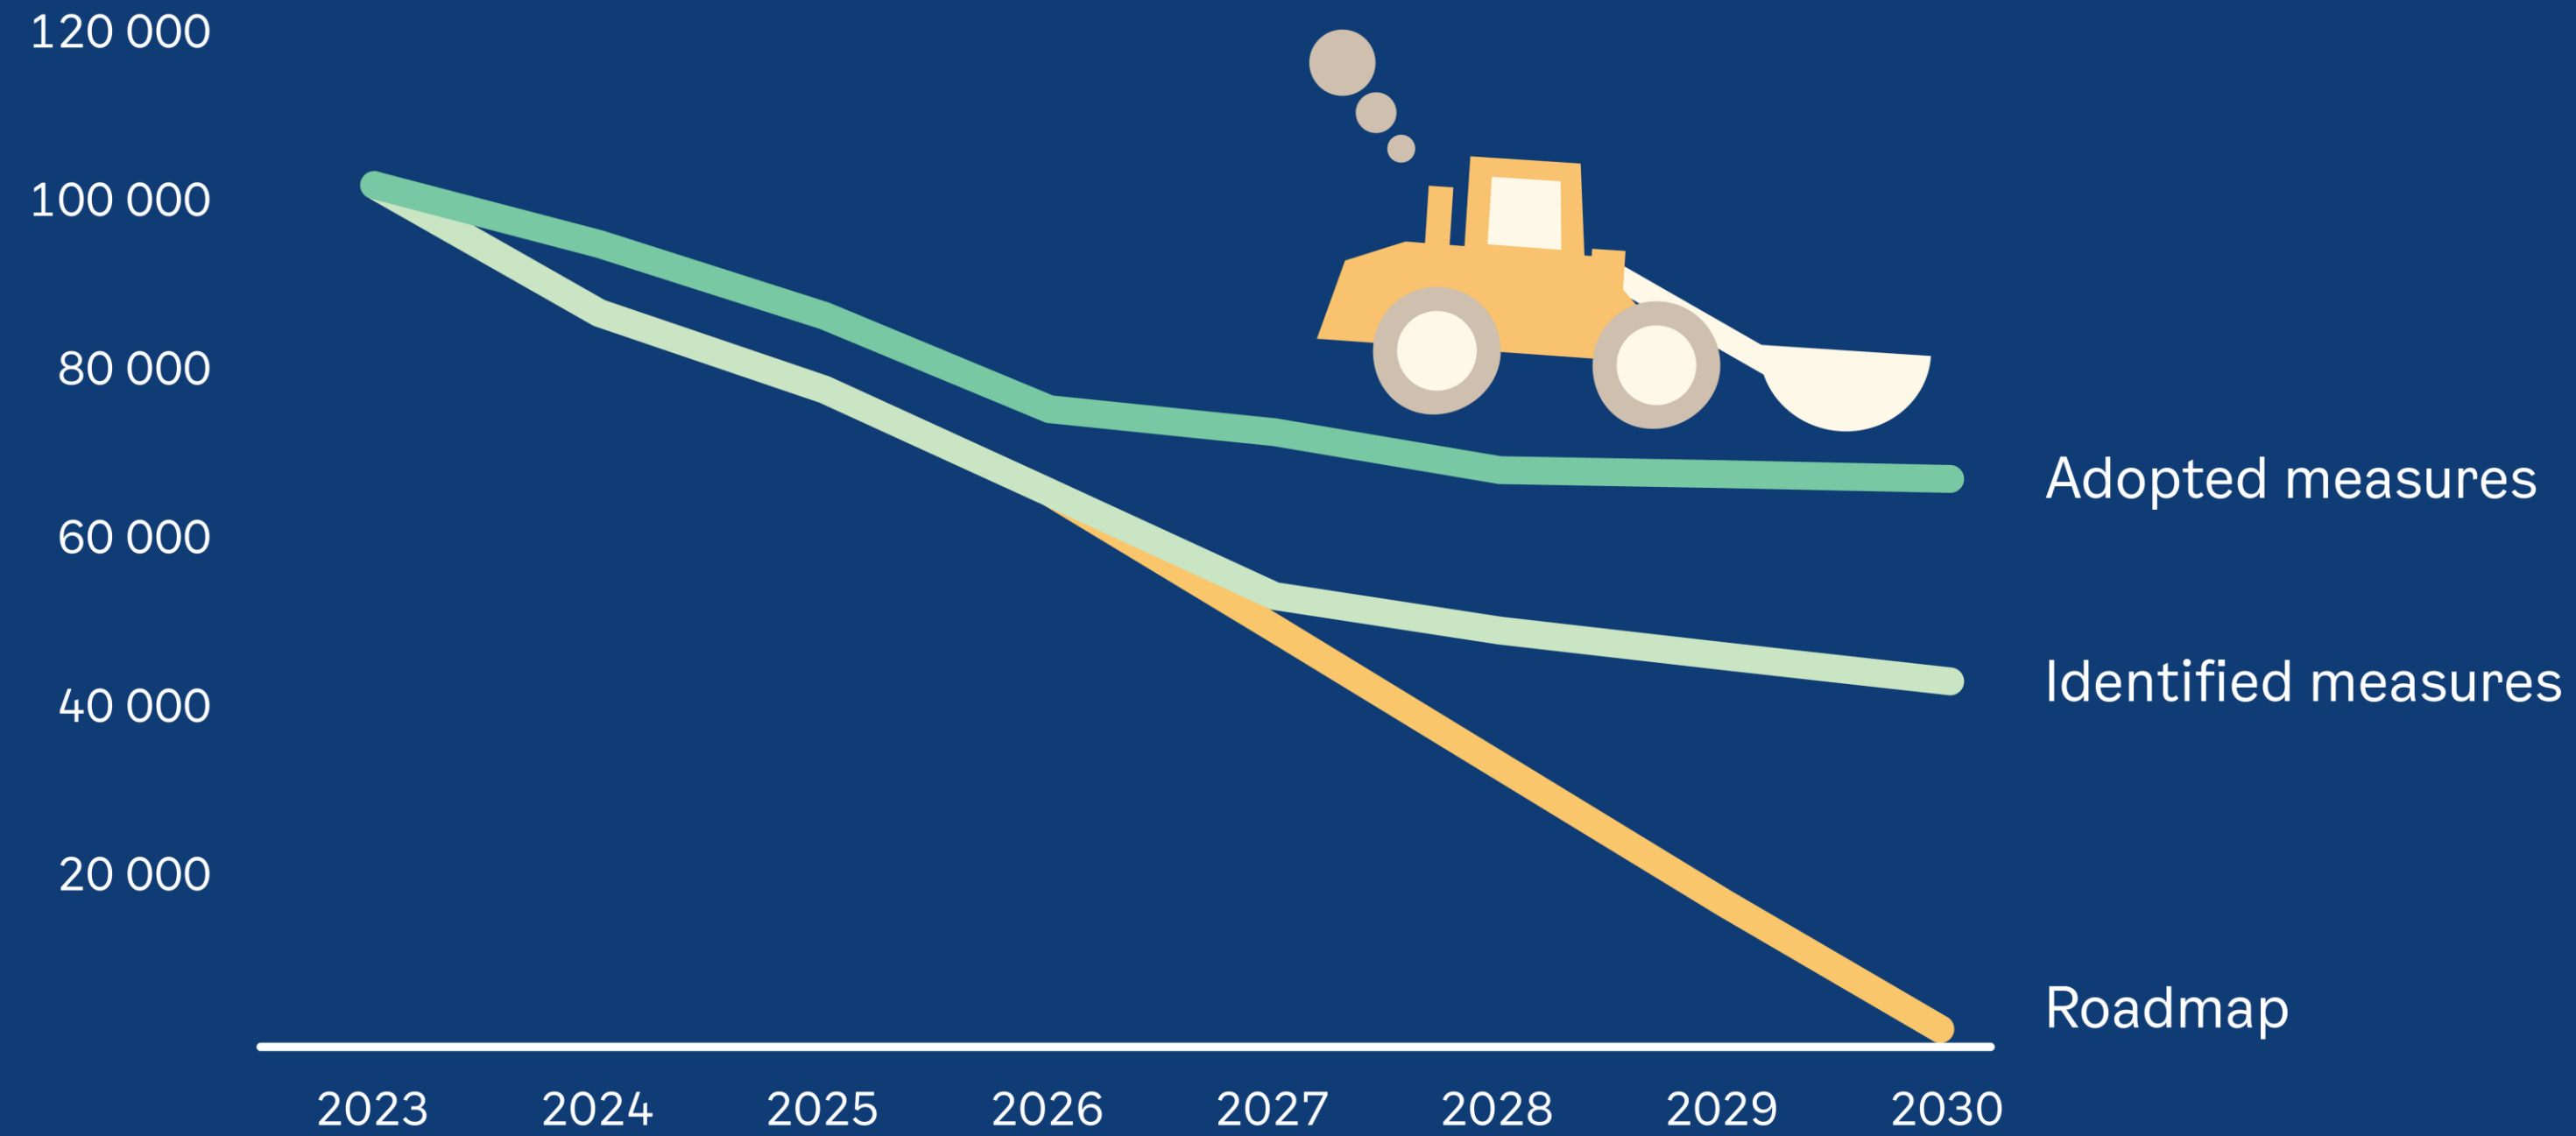

City Land Use Plan

- Emission accounting in construction
- Materials use and reuse
- Circular soil
- Nature and green areas

Advocacy – National Level

Tonnes CO₂-e

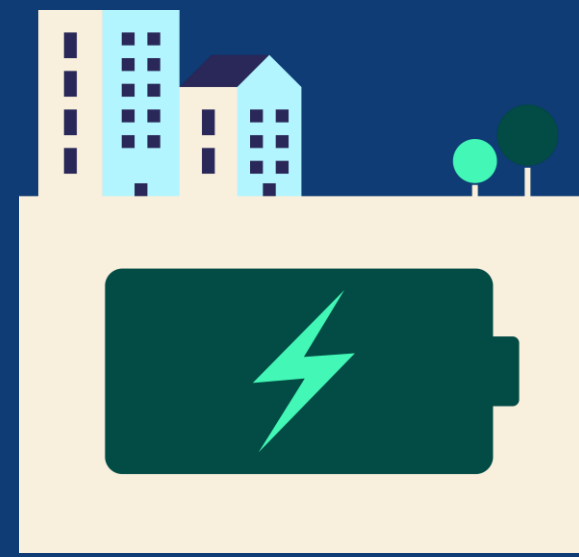

Energy Use and Production

**Energy
efficiency**

**Energy
production**

**Energy
flexibility**

Indirect emissions

Oslo's contribution to greenhouse gas emissions outside the municipality is significantly lower in 2030 than in 2020

Buildings and construction: reduce emissions from materials by 30 %

Thank you for your attention
